

MBN Explorer: dynamics of biomolecular systems and self-organization

Version 1.2

(June 1, 2015)

Iliia A. Solov'yov, Gennady Sushko, Alexey Verkhovtsev, Andrei Korol
and Andrey V. Solov'yov

MBN Explorer Tutorials Series: Volume II

A hands-on guide how to use MBN Explorer – a universal computational suite for multiscale simulation of complex molecular structure and dynamics

Contents

- 1 Basics of MBN EXPLORER 3**
 - 1.1 Introduction 3
 - 1.2 MBN EXPLORER main features 5
 - 1.2.1 About MBN EXPLORER 5
 - 1.2.2 Universality 6
 - 1.2.3 Tunable force fields 6
 - 1.2.4 Unique algorithms 7
 - 1.2.5 Multiscale approach 7
 - 1.2.6 Computational efficiency 7
 - 1.2.7 Object-oriented design 7
 - 1.3 Applications of MBN EXPLORER 8
 - 1.3.1 Atomic clusters and nanoparticles 8
 - 1.3.2 Biomolecular systems 8
 - 1.3.3 Nanostructured materials 9
 - 1.3.4 Composite materials and hybrid molecular systems 9
 - 1.3.5 Crystals, liquids, glasses, gases and interfaces 9
 - 1.3.6 Thermo-mechanical properties of materials and related phenomena 10
 - 1.3.7 Multiscale phenomena 10
 - 1.3.8 Dynamical molecular processes and related phenomena 10
 - 1.3.9 Emerging technologies 11
 - 1.4 Current status and future plans 11
 - 1.5 How to get MBN EXPLORER? 12
- 2 Setting up the calculation 13**
 - 2.1 Required programs 13
 - 2.2 MBN EXPLORER files needed to start the calculation 13
 - 2.2.1 Configuration file 13
 - 2.2.2 Potential file 15

2.2.3	Input file	17
2.2.4	Format of other input files needed for simulation of biomolecules	20
2.2.5	System manipulation file	21
2.3	Format of output files	23
3	Overview of the MBN EXPLORER examples library	25
3.1	Single-point energy calculation	25
3.2	Structure optimization	28
3.3	Molecular dynamics	29
3.4	Random walk dynamics	32
3.5	Relativistic dynamics	33
4	Biomolecular damage: thermo-mechanical mechanism	37
4.1	Description of long-range Coulomb interaction: Ewald summation method	38
4.2	Creating input files for simulation	39
4.2.1	Building the system	40
4.2.2	PDB file	41
4.2.3	Topology file	42
4.2.4	Potential file	43
4.2.5	Extended CHARMM force field	46
4.2.6	Configuration file	47
4.2.7	Input file	52
4.3	Running the simulation	52
4.4	Analysis of the simulation	53
4.5	Further applications	56
5	Dynamical and collision processes	57
5.1	Energy and temperature control	58
5.1.1	Energy control	58
5.1.2	Temperature control	59
5.2	Thermal vibrations of a many-particle system	60
5.2.1	Creating initial files for simulation	60
5.2.2	Running the simulation	66
5.2.3	Visualization of fullerene dynamics	66
5.2.4	Analysis of the simulation	67
5.3	Collision of two atomic clusters	68
5.3.1	Creating initial files for simulation	68
5.3.2	Running the simulation	70
5.3.3	Analysis of the results	70
5.4	Interaction of biomolecules with a surface	71

5.4.1	Creating initial files for simulation	72
5.4.2	Running the simulation	80
5.4.3	Analysis of the results	80
6	Random walk and pattern formation	81
6.1	Stochastic Monte-Carlo-based Dynamics	81
6.1.1	General algorithm for random walk dynamics	82
6.1.2	Random walk dynamics on hexagonal grid	83
6.1.3	Random walk dynamics in the presence of a surface	84
6.2	Random walk dynamics of a single particle	85
6.2.1	Input file	85
6.2.2	Configuration file	86
6.2.3	Running the simulation	88
6.2.4	Visualization of random walk dynamics	88
6.3	Nanowire evolution	91
6.3.1	Input file	91
6.3.2	Configuration file	92
6.3.3	Running the simulation	93
6.3.4	Visualization of nanowire fragmentation dynamics	94
6.4	Fractal self-assembly on a surface	94
6.4.1	Configuration file	95
6.4.2	Running the simulation	97
6.4.3	Visualization of fractal formation	97
