A hands-on guide how to use **MBN EXPLORER** – a universal computational suite for multi-scale simulation of complex molecular structure and dynamics, and **MBN STUDIO** – a special multitask software toolkit.

Contents

1	Basics of MBN EXPLORER and MBN STUDIO	3
1.1	Introduction	3
1.2	MBN EXPLORER main features	4
1.2.1	About MBN EXPLORER	4
1.2.2	Universality	7
1.2.3	Tunable force fields	7
1.2.4	Unique algorithms	7
1.2.5	Multiscale approach	8
1.2.6	Computational efficiency	8
1.2.7	Object-oriented design	8
1.3	MBN STUDIO main features	8
1.3.1	About MBN STUDIO	8
1.3.2	Project set-up	10
1.3.3	Output data handling	10
1.3.4	Visualization tools	11
1.3.5	Analytic tools	11
1.3.6	Standard input/output formats	11
1.3.7	Links to databases and libraries	12
1.3.8	Video rendering	12
1.3.9	System modeler	12
1.4	Areas of application of MBN EXPLORER and MBN STUDIO	13
1.4.1	Crystals, liquids, and gases	13
1.4.2	Atomic clusters and nanoparticles	13
1.4.3	Biomolecular systems	14
1.4.4	Nanostructured materials	14
1.4.5	Composite materials and material interfaces	14
1.4.6	Thermo-mechanical properties of materials and related phenomena	15
1.4.7	Collision processes and related phenomena	15
1.4.8	Emerging technologies	15

2	Getting started with calculations	17
2.1	MBN EXPLORER computational tasks	17
2.2	MBN EXPLORER files needed to start the calculation	20
2.2.1	Configuration file	20
2.2.2	Input file	21
2.2.3	PDB file	25
2.2.4	Potential file	27
2.2.5	CHARMM molecular mechanics potential file	30
2.2.6	Topology File	32
2.2.7	Chemical rules file	34
2.2.8	System manipulation file	36
2.3	Format of output files	37
3	MBN STUDIO	41
3.1	Getting started	42
3.1.1	MBN STUDIO Tools	43
3.2	Construction of MBN systems with the modeling plug-in	45
3.3	Setting up the calculations with MBN STUDIO	48
3.3.1	Single-point energy calculation	50
3.3.2	Structure optimization project	53
3.3.3	Molecular dynamics project	58
3.3.4	Random walk simulation project	61
3.3.5	Relativistic dynamics project	63
3.4	Visualization of the simulation results	66
3.5	MBN STUDIO analysis tools	69
4	Crystals, liquids and gases	71
4.1	Boundary conditions for a simulated system	71
4.1.1	Reflective boundary conditions	72
4.1.2	Periodic boundary conditions	72
4.2	Energy and temperature control	73
4.2.1	Energy control	74
4.2.2	Temperature control	74
4.3	Creating different phase states of matter	76
4.3.1	Crystals	76
4.3.2	Liquids	76
4.3.3	Gases	76
4.3.4	Solvated systems and interfaces	77
4.4	Modeling of a crystalline sample and a monatomic gas	77
4.4.1	Optimization of a crystalline sample	77
4.4.2	Creating a gaseous system starting from the crystalline sample	84
4.5	Modeling of a liquid molecular medium	88

5	Atomic clusters and nanoparticles	99
5.1	Creating atomic clusters and nanoparticles with MBN STUDIO	100
5.2	Optimization of monatomic and bimetallic clusters	101
5.3	Thermal fluctuations of a carbon fullerene	105
5.3.1	Running the simulation and analysis of the results	108
5.4	Melting of a small metal cluster	112
5.4.1	Equilibration of the cluster	112
5.4.2	Simulation of the cluster melting	115
6	Biomolecular systems	121
6.1	Molecular mechanics potential for biomolecular systems	122
6.2	Construction and modeling of biomolecular systems	124
6.3	Extended CHARMM force field	132
6.4	Description of the Coulomb interaction: Ewald summation method	134
6.5	Simulation of the covalent bond breakage in a biomolecule	135
6.6	Dynamics of complex biomolecular systems	146
7	Collision processes	149
7.1	Simulation of collision-induced fusion and fragmentation of carbon fullerenes	154
7.1.1	Constructing a system of two colliding objects	155
7.1.2	Simulation of the collision processes	157
8	Multiscale modeling: composite materials and interfaces	165
8.1	Stochastic Monte Carlo-based Dynamics	165
8.1.1	General algorithm for random walk dynamics	166
8.1.2	Random walk dynamics on hexagonal grid	167
8.1.3	Random walk dynamics in the presence of a surface	168
8.2	Simulation of a nanowire evolution	169
8.3	Fractal self-assembly on a surface	171
9	Nanostructured materials	177
9.1	Structure and properties of carbon allotropes	177
9.1.1	Graphite	177
9.1.2	Graphene	178
9.2	Simulation of a graphite nanocrystal	179
9.3	Simulation of a graphene monolayer	187
10	Thermo-mechanical properties of materials	189
10.1	Nanoindentation in brief	190
10.2	Nanoindentation of a crystalline sample	191
10.2.1	Linked cell algorithm	191
10.2.2	Creating initial files for simulation	192

10.2.3	Running the simulation	197
10.3	Visualization and analysis of the results	197
10.4	Tabulated Embedded-Atom-Method (EAM) potential	199
10.5	Other tribology case studies	201
11	Emerging technologies: crystalline undulator based light sources	203
11.1	Numerical design and modeling for emerging and novel technologies	203
11.2	Crystalline undulator as a novel light source	205
11.3	Description of algorithms	216
11.3.1	Relativistic integrator	216
11.3.2	Dynamic simulation box	217
11.4	Generation of medium	218
11.5	Setting up calculations	219
11.5.1	Plugin file	220
11.5.2	Configuration file	221
11.5.3	Potential file	224
11.5.4	Input file	225
11.6	Running the simulation and analysis of the results	227
11.7	Scientific application	229
12	Emerging technologies: ion-beam cancer therapy	231
12.1	Basic facts about ion-beam cancer therapy	231
12.2	Simulation of bond breakage in a DNA molecule due to shock waves	237
12.2.1	Optimization of liquid water box with the DNA molecule . .	237
12.2.2	Equilibration of the liquid water box with the DNA molecule	240
12.2.3	Scaling of atomic velocities inside the “hot cylinder”	240
12.2.4	Simulation of the shock wave propagation	241
12.3	Simulation of the transport of reactive species around energetic ion tracks	243
12.3.1	Simulation of radical diffusion at equilibrium	243
12.3.2	Simulation of radical transport driven by a shock wave . . .	246
13	Novel technologies: advanced deposition techniques	249
13.1	Surface deposition techniques and irradiation driven chemistry . . .	249
13.2	Modeling of FEBID with IDMD	251
13.3	Results of simulations and their validation	256
13.4	Setting up calculations	261
13.4.1	Optimization of a $W(CO)_6$ molecule atop the SiO_2 surface .	261
13.4.2	Optimization of $W(CO)_6$ molecules randomly deposited on the hydroxilated SiO_2 surface	264
13.4.3	Diffusion of $W(CO)_6$ molecules on hydroxilated SiO_2	265

14 Conclusions and outlook	267
14.1 Further development of MBN EXPLORER and MBN STUDIO . . .	267
14.2 How to get MBN EXPLORER and MBN STUDIO?	272
Bibliography	273
